Ilustracije <i>Illustrations</i>	90
Veličina <i>Size</i>	21.6 cm x 14.5 cm
Datum izdavanja <i>Date of publishing</i>	2006
Cijena <i>Price</i>	28 USD
ISBN	1850971188

Multikulturalnost je pojam koji na prvi pogled i nema veze sa stomatološkom strukom. No, to je samo privid, a najčešće ga stvara lokalna mikrosredina u kojoj živimo i radimo. Zbog sve veće otvorenosti granica stanovništvo migrira, pa se mijеšaju različite kulture, a one imaju specifična obilježja u mnogim područjima života, uključujući i oralno zdravlje.

Autori knjige, čiji naziv možemo prevesti kao «Kulturalno osvještena stomatološka skrb», Crispian Scully i Nairn Wilson, stomatološku zdravstvenu zaštitu predstavili su sa sasvim novog stajališta. Detaljno su analizirali različite vjerske i kulturne zajednice te nastojali ustanovitи moguće specifičnosti u stajalištima prema održavanju, ali i postizanju kako zdravlja općenito, tako i zdravlja usne šupljine. Identificirali su moguće poteškoće u radu stomatologa, a uzrokuju ih pacijentova religijska stajališta. U tim nastojanjima autorima je pomogla skupina od 20-ak suradnika iz cijelog svijeta koji pružaju stomatološku skrb, a istodobno dobro poznaju i ili su pripadnici pojedinih vjerskih (kulturnih) zajednica, što pokazuje temeljit i ozbiljan pristup, a knjizi daje dodatnu vjerodostojnost.

Knjiga ima tri poglavlja. Prvo se bavi općim aspektima kulturno osvještene zdravstvene skrbi, a drugo i treće opisuju specifičnosti pojedinih vjerskih zajednica i kulturnih skupina s naglaskom na zdravlje. Tu nas autori obavještavaju o običajima u vezi sa zdravljem ne samo kršćana i muslimana, nego i mormona, taoista, rastafarianaca i mnogih drugih zajednica.

Knjiga predstavlja pravo osvježenje u moru stomatološke literature, a namijenjena je svima koji drže do ugleda i izvan lokalne zajednice u kojoj djeluju.

Multiculturalism is a term that, on a first glance, does not have anything in common with the dental profession. However, that is not absolutely true, it is a mistake caused by one's own micro surroundings of one's working place. The dissolution of borders leads to the migrations and mixing of cultures that have their own specific characteristics that in many segments include oral health.

The authors, Crispian Scully and Nairn Wilson, have made a portrait of the dental care from an entirely new standpoint. They have analyzed different religious and cultural societies in detail, all the time trying to establish possible specificities in attitudes towards the maintenance and establishing health in general, and oral health specifically. They have identified the possible difficulties in dental profession, caused by patient's religious beliefs. A group of some 20 authors from all over the world participated in this project. All the authors are active dentists, and at the same time members or experts on various religious and cultural societies. This confirms the serious nature of the book, and at the same time adds to the book's credibility.

The book is divided in three chapters. The first chapter is about the general aspects of culturally enlightened healthcare, while the second and third chapter deal with specificities of various religious and cultural societies regarding health. We learn about the customs, not only Christian and Moslem ones, but also Mormon, Tao, Rastafarian and a number of other communities.

This book is a real "refreshment" in the sea of dental literature, and is suitable for all dentists that live up to their reputation outside the local community where they work every day.
